

# ABSTRACT

The present invention provides a selective suppressor of the IgE production comprising a compound which suppresses the IgE production in a process from a differentiation of a mature B cell into an antibody-producing cell to the production of an antibody and which does not suppress or weakly suppresses the production of IgG, IgM and/or IgA which are produced at the same time, a compound of the formula (I):

wherein R<sup>1</sup> - R<sup>13</sup> are hydrogen, halogen, lower alkyl, lower alkoxy or the like, X is -O-, -CH<sub>2</sub>-, -NR<sup>14</sup>- or -S(O)<sub>p</sub>- and Y is lower alkyl, lower alkenyl or the like, a process for producing the same and a pharmaceutical composition comprising the same.
